

Design Application Principles

Re-use & Re-purpose

Leverage existing design elements, patterns, or components that have been published in the design library. In case there are new components then DCX will assist to create the same and update the library.

MORE  
ICONS

LESS  
PICTURES

Use more graphical symbols (icons) to convey information and functionality than images. This enhances visual clarity, reduces cognitive load, and promotes faster comprehension for users.

Crisp &  
Clear  
Fonts

The design library has fonts that are legible, well-defined, and easy to read across various devices and screen sizes (Font Size, Weight, Line height & Embellishment). The same needs to be used in Dealer one. Ex - Separate height defined for header & sub title vs body.

FLAT

Learning Curve

Use existing and widely used & accepted interfaces within the industry to help decrease the learning curve of a new user. Ex - Using a radio button for single select vs a checkbox for multi select.

ONE

Action  
at a time

Present users with a singular task or decision point at any given moment, minimizing cognitive overload. By focusing on one action or choice, users can better understand and respond to prompts. Ex - No page to have more than one Primary CTA

DIRECT  
Tone of  
Voice

Use straightforward and concise language to communicate with users, guiding them through the interface or providing instructions in a clear and easily understandable manner. Ex - Sticker sheets have been added to the library with appropriate content for various scenarios for the same component

Next best action  
to be called out

1 2 3 4

Highlight the most relevant or beneficial action for users to take next, based on their current context or goals. Ex - Once the user is done with the online part of a journey they get clear instructions on the next steps of the journey (Call from a Bajaj representative)

Avoid  
Dead | Ends

In case of a journey end provide appropriate actions for the user to continue on interacting with the asset. Ex - In case of service denial the user gets cross sell options and CTA to go back on the homepage.

● Videos  
Over  
Text

Add videos as a form of assistance of knowledge transfer wherever possible since, they are easier to consume with better visual aids than reading. Ex - Adding videos to info drawers in addition to the text assistance.

Provide  
Exits

Provide exit options to the user on every journey or flow, to avoid rage quitting. Ex - every form page has a “Save & Exit” CTA.
